CENTRAL VALLEY COOP

ASCEND. As growers and Agronomists we are all looking for Answers from the ANSWER PLOT®. One of the things that we learned from this year's ANSWER PLOT® is that the yield enhancing product call Ascend really does work.

Ascend is a plant growth regulator and plant stimulator which contains micronutrients and hormones. Ascend will help stimulate a vigorous root formation and development, cell division and cell elongation, therefore creating a larger root mass which will take-up more nutrients and water, creating a taller, healthier plant.

In over 800 replicated trials in the ANSWER PLOT® system there was an average of a 4.5 bushel response to Ascend. In 2010 Central Valley yield data there was a 6 - 10 bushel response to hybrids treated with Ascend. If you are looking for a product to help reach the next yield level the response is real, the data proves it.

Talk to your Central Valley Agronomist about your treatment options.

Left side: 5 gallons 10-34-0 + Zinc
Right side: 5 gallons 10-34-0 + Zinc + Ascend
